Roll no: 241901049 Phone: 9843565002

Branch: REC

Department: I CSE (CS) AC

Batch: 2028

Degree: B.E - CSE (CS)

### NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 1\_COD\_Question 3

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Imagine you are working on a text processing tool and need to implement a feature that allows users to insert characters at a specific position.

Implement a program that takes user inputs to create a singly linked list of characters and inserts a new character after a given index in the list.

## **Input Format**

The first line of input consists of an integer N, representing the number of characters in the linked list.

The second line consists of a sequence of N characters, representing the linked list.

The third line consists of an integer index, representing the index(0-based) after

which the new character node needs to be inserted.

The fourth line consists of a character value representing the character to be inserted after the given index.

### **Output Format**

If the provided index is out of bounds (larger than the list size):

- 1. The first line of output prints "Invalid index".
- 2. The second line prints "Updated list: " followed by the unchanged linked list values.

Otherwise, the output prints "Updated list: " followed by the updated linked list after inserting the new character after the given index.

Refer to the sample output for formatting specifications.

### Sample Test Case

Input: 5

```
a b c d e
2
X
Output: Updated list: a b c X d e
Answer
#include<stdio.h>
#include<stdlib.h>
int main()
{
   int n;
   scanf("%d",&n);
   char *ptr;
   ptr=(char *)malloc((n+1)*sizeof(char));
   for(int i=0;i<n;i++)
   {
      scanf(" %c",(ptr+i));
   }</pre>
```

```
241901049
        canf("%d",&pos);
scanf(" %c",&letter);
if(pos<n)
char letter;
scanf("°,
           for(int i=n;i>pos;i--){
             *(ptr+i)=*(ptr+(i-1));
           *(ptr+(pos+1))=letter;
           n++;
بuated
for(i=0;i<n;i++){
printf("%c " ' ` ` }
           printf("Updated list: ");
             printf("%c ",*(ptr+i));
           printf("\n");
        }
        else
           printf("Invalid index\n");
           printf("Updated list: ");
           for(int i=0;i< n;i++){
             printf("%c ",*(ptr+i));
           }
        }
 Status : Correct
                                                                                     Marks : 10/10
