REC\_DS using C\_Week 7\_COD\_Question 2

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Priya is developing a simple student management system. She wants to store roll numbers in a hash table using Linear Probing, and later search for specific roll numbers to check if they exist.

Implement a hash table using linear probing with the following operations:

Insert all roll numbers into the hash table. For a list of query roll numbers, print "Value x: Found" or "Value x: Not Found" depending on whether it exists in the table.

### **Input Format**

The first line contains two integers, n and table\_size — the number of roll numbers to insert and the size of the hash table.

The second line contains n space-separated integers — the roll numbers to insert.

The third line contains an integer q — the number of queries.

The fourth line contains q space-separated integers — the roll numbers to search for.

#### **Output Format**

The output print q lines — for each query value x, print: "Value x: Found" or "Value x: Not Found"

Refer to the sample output for formatting specifications.

```
Sample Test Case
```

```
Input: 5 10
    21 31 41 51 61
    3
    31 60 51
    Output: Value 31: Found
    Value 60: Not Found
    Value 51: Found
    Answer
   #include <stdio.h>
    #define MAX 100
    void initializeTable(int table[], int size) {
      for(int i = 0; i < size; i++) {
         table[i] = -1;
      }
    int linearProbe(int table[], int size, int num) {
      int index = num % size;
      int start = index:
while(table[index] != -1 && table[index] != num) {
   index = (index + 1) % size:
```

```
if(index == start)
        return -1;
   return index;
void insertIntoHashTable(int table[], int size, int arr[], int n) {
   for(int i = 0; i < n; i++) {
     int pos = linearProbe(table, size, arr[i]);
     if(pos!=-1) {
        table[pos] = arr[i];
                                                                                    24,190,104,9
int searchInHashTable(int table[], int size, int num) {
   int index = num % size;
   int start = index;
   while(table[index] != -1) {
     if(table[index] == num) return 1;
     index = (index + 1) \% size;
     if(index == start) break;
   }
   return 0;
